Default Question Block

Pre-Activity Quiz Prior to Flagmaker Activity

Multiple Choice: Which of the following best describes task decomposition?

The process of breaking down a large task into smaller, independent tasks that can be executed concurrently.

The method of organizing tasks in a sequential manner.

The technique of reducing the number of tasks to improve performance.

The strategy of assigning tasks to a single processor.

True or False: Speedup is defined as the ratio of the time taken to solve a problem on a single processor to the time taken on a parallel system.

True

False

Multiple Choice: What is contention in parallel computing?

The process of dividing a task into smaller sub-tasks.

The competition between multiple processors for shared resources.

The increase in computational speed by adding more processors.

The ability of a system to handle a growing amount of work.

True or False: Scalability refers to the ability of a parallel system to increase its performance proportionally with the addition of more processors.

True

False

Multiple Choice: What is pipelining in the context of parallel computing?

The process of executing multiple tasks simultaneously.

The strategy of reducing contention among processors.

The method of dividing a task into smaller sub-tasks.

The technique of overlapping the execution of multiple instructions to improve performance.
